

1500V photovoltaic inverter features

What is the difference between 1000v and 1500V rated inverters?

The compared inverters have the same dimensions and therefore the same floor space and volume. Comparing the power density, it can be seen that the 1500V rated inverter has 1.44 times more power than the 1000V rated inverter (2.3MW compared to 1.67MW). Thus, the power density in terms of kW/m³ increases 1.38 times for the 1500V rated inverter.

What are new trends in photovoltaic power plants?

Abstract: The paper presents new trends in the development photovoltaic (PV) power plants, with particular reference on new inverter concept with DC-link voltage over 1000 V. For the inverters with the DC-link voltage reaching the value of 1500 V, basic and most important features will be presented.

How efficient is a 1500Vdc inverter?

Efficiency for the 1500Vdc inverter was obtained for both the NPC configuration and the NPS configuration. Simulations were done at 800V dc and 550V ac, and results are depicted in Fig. 6. The inverter using NPS bridge configuration has considerably better efficiency than the NPC configuration.

What is a flexinverter solar inverter?

The FLEXINVERTER Solar Inverter is one of the industry's leading 1500V developments and is GE's latest evolution in renewable power electronics. Building on expertise in the renewables industry, GE now offers its latest power conversion technology for efficient, cost effective and dispatchable solar power.

What voltage does a 2L solar inverter use?

For the standard 2L topology, the full system operating voltage in a solar central inverter between DC (+) and DC (-) is given with VDC=1500 V. Figure 1 shows the IGBT turn-off event of the FF1800R23IE7 in such a 2L setup with VDC=1500 V, room temperature and with a collector current of IC=1800 A.

Which topology is best for 1500 V high-power inverters?

To implement 1500 V high-power inverters, the NPC1 topology with 1200 V IGBTs is a common approach today. The Active Neutral Point Clamped (A-NPC) topology with active switches in the neutral path offers an additional degree of freedom.

This paper presents the development of a 2.3MW/2.5MVA inverter with a maximum dc voltage of 1500V, for utility-scale photovoltaic applications. Specifications and design considerations are ...

This paper presents the development of a 2.3MW inverter with a maximum DC system voltage of 1500V. A neutral point switch type three-level inverter configuration, so-called T-type three ...

PV inverters with lower DC-link voltages (i.e., <1000 V). However, when it comes to 1500-V PV inverters,
