How to create a 3D model for solar panels?

Placing 2D polygons together with height dimensions will result into an extruded 3D model. Experienced CAD designers or 3rd party design studios can use these generated 3D models in your project as well. Generate optimized 3D module layouts to maximize the number of solar panels in your projects.

How do I build a PV system?

Correctly place PV modules on the roof. Perform Shading analysis to optimise your system design. Create AC and DC SLDs to include in your reports. Create professional site plans and string layouts. Use the flyover video tool to impress your clients. Export your SketchUp data to use in AutoCAD and PVsyst.

How irradiance map & shading analysis can help a solar system?

Automatic population of the rooftop using an irradiance map and shading analysis optimum placement of the solar panels, so you can deliver the best possible layout to your customer. Get the most out of the solar system with automatic electrical design calculation providing you with the best recommendation for highly efficient solar system planning.

What is SketchUp for commercial solar designs?

SketchUp for Commercial Solar Designs is a complete course for you to create professional 3D models and 2D drawings in roughly one day! SketchUp by Trimble is arguably the most widely used computer aided design software in the world today. It's offered in free and paid versions, and allows users to draw and design in 3D.

How do I design a solar roof?

Use Sketchup tools to create a realistic view of existing buildings including all features of the roof. Correctly place PV modules on the roof. Perform Shading analysis to optimise your system design. Create AC and DC SLDs to include in your reports. Create professional site plans and string layouts.

Do I need to redraw my module layout in PVsyst?

There's no need to redraw your module lay-out in PVsyst. Thanks to our pv plugin, you can simply export your drawings from AutoCAD or BricsCAD to within seconds and start simulating the performance and yield of your system immediately. Both fixed tilt and tracker systems are supported by the .PVC export format or .CSV of ground mesh.
