

Acheleous Energy has developed an innovative hybrid technology which couples run-of-river hydrokinetic generation with solar - the Floating Instream Tidal and Solar (FITS) power plant. FITS technology has been specifically optimized for river deployments, and is scalable to enable both energy access and utility scale power generation.

Achelous Energy is delighted announce that it is entering the final phase of its Innovate UK Energy Catalyst 7 grant-funded project for its Floating Instream Tidal and Solar (FITS) Power Plant technology. The company (previously operating as DWR Offshore Limited) was awarded a grant worth more than £1m GBP from Innovate UK, through the Energy ...

Achelous Energy General Information Description. Developer of hydroelectric power device intended to harness river power for achieving zero net. The company's device uses constant resources of flowing river water to power its ...

Green ammonia provides an immediate carbon-free alternative for energy-storage and the fuels powering heavy industry and transportation. Green shipping: The future of trade. International shipping is responsible for 90% of world trade. To support the industry in decarbonisation, it's predicted that green ammonia will make up 25% of the maritime ...

MARKET OVERVIEW New Zealand has ambitious targets for renewable energy. As laid out in its "Budget 2021", the country now targets 90% renewable domestic electricity production by 2025 and 100% by 2030. The country already produces a considerable amount of its domestic electricity from traditional hydropower (~57%, 2020, Statista); though new hydropower projects ...

At Achelous, we support the UN's 17 Sustainable Development Goals. Our vision and mission as a business is directly aligned with many of the goals and we're proud to be developing technology that generates and distributes green, affordable energy for everyone, everywhere.

AEL started its own hydrokinetic technology pathway in tidal energy, patenting a seabed mounted Vertical Axis Turbine for the UK tidal market in 2018. But with the CfD scheme not quite ready to specifically support UK tidal at that stage, the company sought to develop and hone its hydrokinetic expertise in the global river market, where it ...

The river island of Koah Peam Reang is located in the Mekongriver, approximately 60km south of Cambodia's capital city, Phnom Penh. Likemany other island communities on the river, Koah Peam Reang has a flourishingagricultural industry, with the island's soilsbeing regenerated year-on-year by rich river silts travelling downstream.
