

Discover Aggreko's latest mid-size battery energy storage units and their significance for the oil and gas industry. These new units, with capacities of 250 kW/575 kWh and 500 kW/250 kWh, offer versatile applications and advanced features that set them apart from other solutions in the market

Battery storage is the third pillar of our offering and key for a stable and reliable power supply. It strengthens your grid by buffering the impact of fluctuating power demand and supply. At the same time, you increase your generators' lifespan and decrease associated operations and maintenance (O&M) costs by running them less and more ...

Discover Aggreko rental battery & energy storage systems & solutions, including plug & play battery systems, suitable for both commercial & industrial use. Delivering the ultimate performance efficiency by enabling you to store and ...

30 kVA Battery Storage Our 30 kVA batteries reduce generator run time, which decreases the fuel consumption and noise on site, helping you save on both emissions and on costs. It supports you in meeting local emissions regulations, adding to your social responsibility image and decarbonisation efforts.

Aggreko has increased its global investment in mobile battery energy storage solutions (BESS) to around \$200m, allowing more industries to access the latest in battery technology and reach net zero targets.

A battery energy storage system (BESS) is a technology that allows for the storage of electrical energy in batteries, which can then be used to power electrical loads. BESS can be used for a variety of applications, including grid ...

The 1kW/1.2kWh Battery Energy Storage System (BESS) is a versatile and environmentally friendly solution that operates with zero emissions, making it ideal for emission-regulated projects. It integrates seamlessly with Aggreko's ecosystem and supports both thermal and renewable energy sources.

Aggreko, the global leader in mobile and modular energy solutions, today announces the launch of a new fleet of battery storage systems. These fully integrated units will help customers to maintain a 100% reliable power supply while reducing the runtime of their thermal generators, leading to significant cost and emission savings.

And, at Aggreko, we're passionate about finding renewable energy solutions for our customers, without sacrificing productivity. ... Far less complicated, and considerably more versatile than it may seem, energy storage - often in the form of battery storage - is a process by which a battery energy storage system conserves energy for use ...

Aggreko believes that hybrid modular power systems that can incorporate solar generation and battery storage could be the key to unlocking decarbonisation in heavy industry. We talk to Andrew Boyd, global director of ...

HOUSTON, August 20, 2024 - Aggreko, a global leader in energy solutions, announced today the addition of two new mid-node battery energy storage systems (BESS) to their Greener Upgrades line of temporary power options. The two integrated energy storage solutions are excellent options for North America customers looking for greener and more efficient energy options for larger ...

A flexible mid-node battery energy storage system (BESS) with rapid deployment and remote monitoring. Our 500 kW/250 kWh battery solutions are backed by engineering expertise to help reduce emissions, fuel consumption, and costs.. Built for rapid deployment, our 500 kW capacity batteries are a fast way to increase your efficiency, on or off the grid.

Our battery storage is a ready-to-install energy system - with everything included in a standard container. That includes batteries, inverter, HVAC, fire protection and auxiliary components, all tested by our experts and operated by the smartest software on the market.

Integrating a Battery Energy Storage System (BESS) with a generator allows for a more optimised power solution. The BESS can support the generator during periods of high demand, enabling the generator to be downsized to cover the base load efficiently. A battery can be a reliable and more sustainable energy source for powering tower cranes.

Our fully integrated, plug-and-play battery energy storage solutions (also known as BESS) come in different sizes, from 30 kVA to 1MW, to suit a wide range of industrial and commercial energy storage applications. They ensure maximum system effectiveness and efficiency.

A battery energy storage system (BESS) is a technology that allows for the storage of electrical energy in batteries, which can then be used to power electrical loads. BESS can be used for a variety of applications, including grid stabilisation, load shifting, backup power, and integration with renewable energy sources such as solar and wind power.
