Should Angola invest in energy storage solutions?

With the ongoing solar projects under development in Angola with an installed capacity amounting to 500 MW, it is urgent to start thinking about efficient energy storage solutions. What structural challenges must be addressed for Angola to seize its renewable energy potential?

Can Angola achieve energy self-sufficiency?

Angola has everything it needs to achieve energy self-sufficiency through renewable sources - not only water, but also sun and wind. With these three natural resources, Angola could achieve the transition from oil and gas to renewable energies, and then boost its energy self-sufficiency.

Can a gas grid be used in Angola?

This is not possible in Angola as there is no gas grid, but the hydrogen obtained from renewable energies can be shipped overseas or converted into ammonium. In turn, this chemical compound can be used as an energy storage component that could be exported or used for the fertiliser industry.

Can Angola deploy pumped-storage hydroelectricity & hydrogen solutions?

Fernando Prioste, CEO of COBA Group, talks to The Energy Year about Angola's potential for deploying pumped-storage hydroelectricity and hydrogen solutions as it develops a robust energy industry and the central role of COBA Group in the country's power arena.

What are the options for power generation in Angola?

Angola has numerous options for the generation of power. The present document considers the key options - hydro, thermal and new renewable - individually and combined in scenarios that meet the required levels of safety and redundancy.

Does Angola have a long-term plan for renewables?

The Angolan Government has an ambitious Action Plan for the period up to 2025 with around US \$18 billion worth of investments into renewables underway, and it has a long-term vision for the power sector with a clear roadmap to provide modern electricity services to 60% of the population by 2025.
