

Mt. Howe, Antarctica, 1991 Stephen L. DenHartog February 1993.r3, a 93-08627 I4 21 075. The blue ice area just west of the Mt. Howe ridge in Antarctica was surveyed ... Installation of an ...

Atmospheric scientists and meteorologists in Antarctica monitor ozone concentrations each week by releasing an "ozonesonde". These hydrogen-filled balloons can ascend up to 35 kilometres, measuring ozone as it moves through the atmosphere, and transmitting data every two seconds during the three-hour flight.

NDVI has been used to monitor mosses effectively in maritime regions of Antarctica, including in our study region 55, and is therefore well suited to our aims of mapping the occurrence of moss ...

Mount Erebus acts as an active volcano, located on Ross Island, which is separated from the main route. Currently, Mount Erebus can only be accessed by boat from the docks at Base Camp. Upon reaching the top of Mount Erebus, players would receive 20 coins and a badge. To return back to the main route, players would need to follow the poles and complete various obstacles ...
