

Antarctica solar battery banks

What makes Antarctica a good place to store energy?

A room full of classic lead-acid batteries enables the station to store energy for times when demands exceeds the current energy production. While the renewable energy systems that power the station are reliable and continuously checked, even in the harsh conditions of Antarctica, two generators were installed for security and backup.

Why did Antarctica have two generators?

While the renewable energy systems that power the station are reliable and continuously checked, even in the harsh conditions of Antarctica, two generators were installed for security and backup. They are also used to provide scheduled full load cycles which are part of the battery bank life performance.

Will hydrogen fuel cells be used in Antarctica?

In the future, the station's engineering team plans to install hydrogen fuel cells as an additional intermediary backup system. Two of the most omnipresent features of Antarctic weather (during the Austral summer) are the wind and the sun. Two renewable sources that provide free energy to the "zero emission" Princess Elisabeth Antarctica.

Why are there so many wind turbines in Antarctica?

The katabatic winds on the Antarctic continent provided the answer to that issue, as the wind gusts from the plateau are as fierce in the winter as they are in the summer. Along the ridge of the Princess Elisabeth Station are nine wind turbines, installed by the IPF crew to complement the solar installations.
