

Are solar panels worth installing

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about £7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 12 and 17 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

Do solar panels increase property value?

Solar panels are attractive to potential new homeowners when you next sell your home, which can increase your property value as a result. That might seem like a long time, but it's worth remembering that solar panels can provide all of your energy needs, making your home potentially energy self-sufficient.

Are solar panels worth it?

If you're ready to save some cash, while you help save the planet, take a look at the solar panel stats and weigh up the pros and cons of solar panels for yourself to see if they will be worthwhile. Solar panels are very energy-efficient and reduce reliance on the National Grid.

Should you add solar panels to your home?

This isn't the case for renewable electricity tariffs sold by energy suppliers. Adding solar panels improves the energy performance of your home, too, and can boost your energy performance certificate (EPC) rating. Are solar panels a good investment?

Over the past decade, the cost of solar power has halved, making it a more attractive option for homeowners. With gas prices on a rollercoaster and climate change concerns mounting, solar panels are expected to become even more cost-effective in the future. After installation, solar panels start saving you money on energy bills immediately.

Is it worth getting solar panels in the UK?

It's definitely worth getting solar panels in the UK. The UK isn't especially sunny, but it receives more than enough daylight to save households hundreds of pounds per year on their electricity bills - and what you don't use, you can sell to the grid.
