Do wind turbines affect human health?

The team's more recent study didn't explicitly find evidence that exposure to wind turbines actually impacts human health, but in the future, "measuring the population's perceptions and concerns before and after turbine installation may help to clarify what effects -- if any -- exposure to wind turbines may have on quality of life," Sulsky said.

Does living near wind turbines pose a health risk?

But for some, the shifting winds of the renewable energy revolution isn't a pleasant one. Twenty-five peer-reviewed studies have found that living near wind turbines does not pose a risk on human health. The amount of wind power generated in America has nearly doubled in recent years.

Are wind turbine vibrations a health hazard?

Health effects of vibrations of wind turbines were surveyed only subjectively in two cross-sectional studies. Two systematic reviews concluded that evidence on the health impact of low-frequency noise is missing. Another systematic review found a lack of evidence concerning the health impact of electromagnetic radiation.

Does wind turbine noise affect mental health?

Results on the impact of wind turbine noise on sleep disturbance, quality of life, and mental health problems differed among cross-sectional studies. There were few studies that addressed the potential impact of turbine noise on clinically apparent health outcomes. There were also few studies on visual risk factors or infrasound exposure.

Are wind turbines dangerous?

Wind farms do not pose a risk of radiation exposure. Electromagnetic field levels in the vicinity of wind turbines are actually lower than what's produced by most common household electrical devices and are well below any regulatory guidelines. Do modern wind turbines still cause problems?

Does wind turbine infrasound affect health?

The first scientific investigation on the health impact of wind turbine infrasound was published in 2013. No observational studies, but 7 experimental studies were identified, that studied its effects on physical symptoms, affective symptoms, the activation level, and noise annoyance.

People say wind projects near their homes, different from the off-shore wind farms at sea, have caused a range of harmful effects on their bodies, including migraines, chronic pain, increased...

LFN from wind turbines is potentially annoying to residents living nearby and affects human health. This study assessed the response of HRV indicators (SDNN and LF/HF) to LFN exposure and ...

# Are wind power stations harmful to humans

Wind turbine noise is not associated with stress effects and biophysiological variables of sleep. Results on the impact of wind turbine noise on sleep disturbance, quality of ...

Although wind power is more acceptable in terms of its environmental impact, possible risks to human health are still being discussed. The aim of this study is to systematically evaluate the methodology and the ...
