Does Azerbaijan have a 'SOCAR' deal?

Azerbaijan's state-owned SOCAR company will explore the area in the Mediterranean north of the giant Leviathan field. This is way more than just an energy deal.

What does SOCAR stand for?

Thank you! Once synonymous with Azerbaijan's oil and gas wealth, the State Oil Company of Azerbaijan (SOCAR) is now making waves on the global stage as it embarks on a transformative journey into the green energy sector.

Where does SOCAR operate?

It operates the country's only oil refinery, one gas processing plant and runs several oil and gas export pipelines throughout the country. It owns fuel filling station networks under the SOCAR brand in Azerbaijan, Turkey, Georgia, Ukraine, Romania, Switzerland, and Austria.

How many oil refineries does SOCAR have?

SOCAR has two oil refineries and one gas processing plant. Azerneftiyagh Oil Refinery specializes in the production of fuels and oils, producing gasoline, kerosene and diesel distillates, various oils (industrial, motor, transformer etc.) and asphalt.

Who is the new president of SOCAR?

In December 2005, the former head of the Baku Oil Refinery and a member of the Azerbaijani parliament, Rovnag Abdullayev, was appointed President of SOCAR. He replaced Natig Aliyev, who was named Azerbaijan's Minister of Industry and Energy.

What is SOCAR's journey?

SOCAR's journey is a microcosm of the broader energy transition--a balancing act between legacy energy systems and future-oriented green solutions. It's not just about reducing emissions; it's about redefining what it means to be an energy company in a world increasingly driven by sustainability.

SOCAR's Heydar Aliyev Baku Oil Refinery. Azneft, a business that integrated the Azerbaijani oil industry was created after the Bolshevik Revolution through the nationalization of the Azerbaijani oil industry. It was subordinate to different organizations in the former Soviet Union and the Azerbaijan Soviet Socialist Republic, depending on its organizations' characteristics at ...

Armenia has a great potential for solar energy (the average annual value of solar energy flow on 1 m² horizontal surface is 1720 kWh/m², and a quarter of the territory of the republic is endowed with solar energy resources with an annual intensity of 1850 kWh/m²). Technology today allows us to capture and store solar energy, reducing energy ...

YEREVAN, November 28. /ARKA/. The growing number of solar power plants in Armenia suggests that we will exceed the goals set by the energy development strategy, in particular, reaching a 15% share of solar energy in the total by 2030," Armenian Minister of Territorial Administration and Infrastructure Gnel Sanosyan said during the Energy Week in Armenia ...

In 2017, Tamara Babayan, a sustainable energy expert, estimated the potential of Armenia's distributed solar power at 1,280 MW and almost 1,800 GWh in annual generation. This estimate is based on the assumption that half of the available rooftop area in Armenia is developable, indicating that there is significant potential for further growth in the sector.

Lithuanian solar energy company will supply Armenian education, art, medical institutions with clean energy. The Lithuanian solar energy company Solet and the OHM Energy will install a solar power plant in Armenia, which will provide electricity to 10 public institutions, including schools, educational, medical and other institutions. ...

Since then, the Armenian energy sector has been modernized and a number of new laws and governmental decisions have been adopted to stabilize the energy sector. On 7 March 2001, the National Assembly of the Republic of Armenia adopted the Law on Energy of the Republic of Armenia. According to this law, the main principle of the Government's ...

The Armenian government is looking to expand the country's renewable energy capacity with an ambitious plan to build two new solar power plants. This month, the government finalized a deal with United Arab Emirates-based renewable energy company Masdar to build the first plant by 2025.

Armenia's energy sector has moved from a state of severe crisis in the early 1990s to relative stability today. A combination of policy, legal, regulatory, and institutional reforms have had good results. Improvements in operating efficiency through a decrease in technical and nontechnical line losses, as well as a nearly 100 percent ...

Energy System diversification, regional integration, and energy efficiency are the pillars of energy security for Armenia. Read more. Agency Projects «Agrivoltaic as an Innovative Approach to Agriculture» project 29 Feb 2024.

Optimum Energy Armenia creates value for clients by successfully harnessing the expertise of highly skilled multi-disciplinary engineering team in design, delivery and operation of high quality sustainable energy

solutions locally and internationally.

We have implemented more than 500 projects both in Armenia and abroad. Only the best components from the world's leading companies are used in the stations. For many years, our partners have been in superior positions on the prestigious rating lists of the sector (Bloomberg New Energy Finance Ratings).

The Project results are apparent: as of 1 July 2019, 1145 autonomous energy producers are connected to the Energy Network of Armenia, with about 17 MW capacity. 88 with 2.43 MW total capacity are in the process of connecting. As of December 1, 2018, there are 1654 Solar Water Heaters installed in non-gasified communities.

In 2021, several parallel efforts were under way to create a comprehensive policy framework for energy efficiency in Armenia.¹ The government's new National Programme on Energy Saving and Renewable Energy for 2021-2030 (adopted 24 March 2022) includes Armenia's main energy efficiency policies and targets to 2030, based on analysis of ...

Armenia is on the brink of a renewable energy revolution as the construction of its largest solar power plant, Masrik-1 is well underway in the Gegharkunik region. Spearheaded by the Shtigen Group, this ambitious project promises to reshape the country's energy landscape and significantly reduce its carbon footprint.
