Does Kitepower have an airborne wind energy system in Aruba?

Towards the end of November of last year, the Dutch sustainable energy start-up Kitepower proudly announced that it had been successful in deploying its Airborne Wind Energy System (AWES) in Aruba. The AWES Falcon 100kW, as it's called in its entirety, is an innovative system consisting of a ground station, tether, control unit and kite.

How much wind capacity does Aruba need?

Aruba's 30-MW wind project at Vader Piet currently produces 13% of Aruba's load requirements, with an additional 26.4 MW slated to come online in late 2015. WEB Aruba aims to add 3 MW to 6 MW to the biogas plant, with a goal of using 70% of household waste. Therefore, Aruba needs more wind capacity to meet its energy demands.

Where is NTW Wind Systems headquartered?

NTW Wind Systems is headquartered in Poznań, Poland. What industry is NTW Wind Systems in? NTW Wind Systems's primary industry is Alternative Energy Equipment. Is NTW Wind Systems a private or public company? NTW Wind Systems is a Private company. What is NTW Wind Systems's current revenue? The current revenue for NTW Wind Systems is 000000.

Who is the CEO of NTW wind systems?

Jakub Buszyński is the CEO of NTW Wind Systems. Where is NTW Wind Systems headquartered? NTW Wind Systems is headquartered in Poznań, Poland. What industry is NTW Wind Systems in? NTW Wind Systems's primary industry is Alternative Energy Equipment. Is NTW Wind Systems a private or public company? NTW Wind Systems is a Private company.

Does Aruba use ice for building cooling?

Aruba's utility installed a pilot ice storage cooling system that makes ice at night when electricity costs are lower. Ice is then used the following day to cool buildings instead of traditional air conditioning. Currently, Aruba gets 15.4% of its electricity from renewable sources.

Does Aruba aim for sustainable development?

Aruba has announced its commitment to sustainable development, as stated in the 2011 document titled "The Green Gateway". During the Rio +20 United Nations Conference on Sustainable Development in 2012, the country declared its goal to achieve 100% renewable energy use by 2020.

Below the cut-in wind speed, the turbine cannot produce power because the wind does not transmit enough energy to overcome the friction in the drivetrain. At the rated output wind speed, the turbine produces its peak power (its rated power). At the cut-out wind speed, the turbine must be stopped to prevent damage.
