

Atlanta solar Japan

Is solar energy the future of Japan's Energy Strategy?

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality by 2050 with an interim goal of 36-38% of energy from renewables by 2030.

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

Why is solar power growing in Japan?

The steady growth of solar power in Japan is attributed to several factors, including the country's focus on energy security, economic efficiency and environmental sustainability. Post-Fukushima, there was a national reevaluation of energy sources.

Does Japan need solar energy?

This will need to dramatically increase for Japan to stay aligned with its renewable energy and decarbonisation goals. Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals.

How much solar energy does Japan need in 2022?

This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy. In total, solar energy in Japan grew from 11.05 TWh in 2010 to over 260 TWh in 2022. However, even with this shift, the country must dramatically increase its solar energy infrastructure to meet its 2030 and 2050 targets.

Why is agrivoltaics becoming more popular in Japan?

Moreover, initiatives like agrivoltaics and floating solar power plants are becoming more popular, allowing the country to capitalise on a growing portion of its potential solar capacity. Japan is home to over 50 of the world's 100 largest floating solar facilities and around 2,000 agrivoltaic farms.

Yes, solar panels are absolutely worth the investment in Atlanta. The Georgia capitol receives approximately 4.5 hours per day of peak sun, or the amount of time the sun's rays are at their most powerful in a given area.
