

Can Bangladesh's electricity distribution network keep pace with rising electricity generation?

But the electricity distribution network could not keep pace with the remarkable increase in electricity generation," said Dandan Chen, World Bank Acting Country Director for Bangladesh. "This program will help modernize and ensure climate resilience of the distribution network, which is the backbone of a secure and reliable power system."

Who regulates the power sector in Bangladesh?

The power sector of Bangladesh is primarily regulated by the Bangladesh Power Development Board (BPDB) under the guidance of the Ministry of Power and Mineral Resources (Fig. 3.5). Gives a pictorial overview of the institutional structure of the Bangladesh power sector. (Source: Ref. ) Here, BPDB acts as a single buyer.

Does Bangladesh have an electricity power system?

Bangladesh's power system has not been able to capitalize on the ever-lower global cost of solar and wind power, which can help Bangladesh reduce the average cost of power generation and improve the financial sustainability of the system. The 8FYP has insightfully identified the major issues faced by Bangladesh's electricity power system.

How much power does Bangladesh need?

The Power System Master Plan 2016 projected peak electricity demand to reach 13,300 MW by 2020, 19,900 MW by 2025, and 28,000 MW by 2030. To meet the projected annual demand growth of about 13% during 2018-2020 and 10% during 2020-2030, Bangladesh will need to add about 25,000 MW of generating capacity during 2019-2030. 5.

Does Bangladesh have a biomass to electricity project?

In Bangladesh, primarily one biomass to electricity large project system is in running with a capacity of 0.4 MW since December 2015, in Thakurgaon district and the project is financed by IDCOL. Fig. 20. Global rice husk production in the year 2018-2019 [Authors creation based on [95]]. 6.3.2. Future prospect of biofuel energy in Bangladesh

Is power overcapacity a problem in Bangladesh?

The 8FYP (Eighth Five-Year Plan) has identified power overcapacity as a problem in Bangladesh's power system. To address this issue, the new IEPMP (Integrated Energy Policy Master Plan) must prioritize grid investments so that better use can be made of existing capacity.

The existing renewable energy tariff in Bangladesh is half the cost of electricity generated by oil-fired power plants. Solar power for daytime peak application and evening peak use, supported by two- to three-hour battery backups, will allow the BPDB to significantly lower the power generation cost and minimise capacity payments.

The Government of Bangladesh (GoB) envisages a dramatic increase in coal-fired generation to meet demand for base-load power. The latest projections by the Power System Master Plan ...

Rebooting the power system model is the need of the hour. Growing reliance on imported fossil-fuels-based development and overcapacity have landed Bangladesh's power sector in a situation that calls for a reboot of the future planning process. There must be measures to stop the bleeding of the power sector.
