Current: 10kwh xyz inverter (20kwh piek), 60kwh new lifepo4 cells eve, 10 kwh nimh second handed. Coming soon extra: 4kwh Victron inverter, 25kwh li ion 18650 cells, 15kwh nimh, 26kwh new lifepo4, 2 to 3 mmpt 100/20 incl extra solar.

At DIY community i am hearing about Sinopoly and Thundersky and Winston etc. But in key players of LFE we only read about CATL, BYDetc. I had an old image in my mind Winston is amazing with its Yttrium cathodeetc with unbeatable 2000+cycles etc.

Feb 4, 2019 #6 I took almost a year to obtain and test around 1500 cells. They were all tested and returned to full charge before putting them in storage. Then a few months later, I would test for self-dischargers.

to disassemble 36v 5.2 ah Taking me a while to disassemble the first battery tried to save the bms. looks like these were tube batteries for bikes. will report how the first cells results when tester is done. The battery was at 31.1v so 3.11v a cell Later floyd

My PowerShelf project has come a long way sinceI started collecting 18650 cellsabout 2 years ago. This is the latest status (April 2020): Background: I've had my gridtied system with feed in tariff installed a few years ago, which unfortunately is nearly useless on cloudy days and entirely...

A little update on tests on a eBay sourced 2 dollar Chinese protection boards. - The board I used was rated for 25 Amps. - As specified, It gives a short circuit protection and cuts of supply instantly in case of a short. - The board does ...

on the wire and one electrode on the battery. T. tatus1969 New member. Joined Jul 16, 2017 Messages 9.

the attached pic is an idea i have of a hopefully working and easy to maintain and "fast" to expand battery pack you should see the pic as electrical and also mechanical plan, the batteries would rest on the long side, the connectors would be at the front facing the user - mostlikely with something like an anderson connector i am used from upss, same goes for the ...

Question about the breakers, can I parallel breakers? Example, using two 50 amp breakers in parallel to get 100 amp breaking capacity. I have been looking at potential power draw, and if I do the math 3000W @ 24V Nominal would require a 125 amp power draw, And if I wanted to do 6000w it would be 250 amp power draw.
