

Humble Bee was created by a hardworking mommy and daddy bees who believe staying active and engaging with the world are the best way to raise healthy kids and build happy families. From our nursing pillows to diaper bags we design products with ...

The use of pesticides on honey bees often leads to mass mortality of the bees and contamination of nectar and pollen, and pesticide residues that are toxic to a bee brood and harm the viability and productivity of bee colonies.

This year, about a fifth of bee colonies, which have been decimated by varroosis for a long time, did not survive the winter in the Czech Republic. This year's bee colony losses are the highest since 2013, when their regular monitoring began. These data result from a survey made by experts from the Department of Biochemistry and the Department of Geoinformatics ...

DOI: 10.1016/J.AGEE.2019.01.002 Corpus ID: 91874529; Comparison of apiculture and winter mortality of honey bee colonies (*Apis mellifera*) in Austria and Czechia @article{Brodschneider2019ComparisonOA, title={Comparison of apiculture and winter mortality of honey bee colonies (*Apis mellifera*) in Austria and Czechia}, author={Robert Brodschneider ...

During a recent outbreak of EFB in Czechia we analysed the bee samples from symptomatic and asymptomatic colonies in Horní Maršov and Pěčín (Northeast Bohemia, Trutnov District) and ...

Honey bees are the most important managed pollinators and provide income because of bee products. In Austria and Czechia, we monitored winter losses of honey bee colonies and also collected ...

Honey bees are major pollinators of crops with high economic value. Thus, bees are considered to be the most important nontarget organisms exposed to adverse effects of plant protection product use. The side effects of pesticides are one of the major factors often linked to colony losses. Fewer studies have researched acute poisoning incidents in comparison to the study ...
