Velcom"s solar power plant is now the largest one in the country in terms of the size and output capacity. The power plant occupies over 41ha and can produce 18.48MW. The facility relies on 85,000 solar panels that convert solar radiation into direct-current electricity. This electricity is fed to 617 inverters to become alternating current.

How do solar panels work? The main component of a solar panel is the solar cell, which can generate electricity from sunlight. Another name for solar cell is photovoltaic. Note that photo means light and voltaic means electricity. Solar cells are usually made of a type of semiconductor metal such as germanium, silicon, carbon silicon carbide, etc.

We offer an extensive range of solar products, including solar panels, batteries, lights, fans, and bulbs, as well as end-to-end project solutions and services for both on-grid and off-grid systems. All our products are equipped with world-class features and backed by our excellent nationwide after-sales service and dedicated installation team.
