

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.

Who is responsible for energy policy in Belgium?

Three federal regions share the energy policy responsibility in Belgium. They include Brussels (the capital), Flanders and Wallonia. The regions are responsible for acquiring and distributing all kinds of energy (renewable and non-renewable). Currently, renewable energy is mainly used in the heat sector in Belgium.

Why is Belgium investing in PV solar systems?

More so,Belgium is primarily invested in PV Solar Systems and could help the region achieve its contribution towards the EU target of renewables.Belgium's renewable energy growth is expected to go from 20% to over 25% within the next two years.

How will Belgium's energy mix change?

Today,Belgium's energy mix relies heavily on fossil fuels. The transition to lower-carbon alternativesand other actions to meet emission-reduction targets,such as greater energy efficiency and recycling,will affect all sectors--from power,industry,and transportation to residential housing and commercial buildings.

Will Belgium's dependence on electricity increase in 10 years?

However, due to the rising demand for electricity, this will no longer be sufficient in 10 years' time. If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050.
