How will the energy plan impact Bermuda?

The Renewable Energy (RA) is confident that the energy plan will help to stabilize the cost of electricity in Bermuda. It will also provide jobs to construct and support the new renewables infrastructure, increase investment opportunities for local and international investors, reduce Bermuda's dependency on fossil fuels, and place Bermuda significantly ahead of its renewables target.

What is our vision for Bermuda energy?

Our vision is an efficient Bermuda powered by affordable renewable energy. Our mission is to help every home and business in Bermuda reduce their energy bills and greenhouse gas emissions through the use of energy efficient and solar energy technologies.

Is energy a real opportunity in Bermuda?

Energy is very expensive in Bermuda, with electricity costing approximately 40 cents a kilowatt-hour, almost 20 cents of which is attributed to fuel. The company sees an opportunity to do in Bermuda what it is doing in the US Midwest in terms of replacing fossil fuel energy generation with renewables.

Are offshore renewable resources needed in Bermuda?

"Due to Bermuda's land constraints, offshore renewable resources are needed to reach higher levels of renewable generation. "Floating solar resources have previously been mostly in ponds and reservoirs but are more recently being developed for the ocean.

What is Bermuda's 'preferred portfolio'?

The "preferred portfolio" proposed in the Regulatory Authority of Bermuda's 2023 Integrated Resource Plan would add an extra ten years to the life of the Belco utility plant's East Power Station engines, and would deliver "85 per cent renewable energy by 2040", cutting carbon emissions by 82 per cent by 2043 compared with 2022 levels.
