

Bess means Germany

What is Bess & why is it important?

BESS is vital to the green energy transition. The storage systems allow for grid stability by storing excess renewable power generated, preventing blackouts and brownouts. As of 2023, Europe installed 5 GW of BESS, but the continent is projected to have installed 42 GW of grid-scale BESS by 2030.

Is this Germany's biggest Bess project?

In November, developer Kyon Energy got approval for a 137.5MW/275MWh BESS project in Germany's Lower Saxony region, and while it might not be the biggest BESS in Europe as Kyon claimed, it was the biggest in Germany to date. Another developer, Eco Stor, however, is also planning two projects of 300MW/600MWh each in the country.

Is Germany's Bess market back on the rise?

Germany's utility-scale BESS market is finally back on the rise and it is perhaps primed to accelerate, given growing commitments at national and European Union (EU) level to renewable energy. The main economic opportunities in Germany are for frequency regulation ancillary services and energy trading on the wholesale market.

When will a Bess project start?

The 2-hour BESS project in Alfeld, Lower Saxony, today (13 November) is scheduled to start construction in 2024 for a commissioning by the end of 2025. Developer Kyon Energy has received approval for a 135MW/275MWh battery storage project in Germany, its second in quick succession.

Why should you invest in Bess assets in Germany?

One of the key factors underpinning the German BESS investment case is a liquid & volatile intraday market. There are strong incentives to balance wind & solar output ahead of delivery in Germany and BESS assets are a key flex provider to enable this.

Why is Bess a key flex provider in Germany?

There are strong incentives to balance wind & solar output ahead of delivery in Germany and BESS assets are a key flex provider to enable this. Volatility in both the Day-Ahead and Intraday markets in Germany is being supported by an increasing incidence of low & negative prices as RES penetration increases.

Despite a significant decline in arbitrage revenues in 2023, BESS returns in NW Europe still look attractive over an investment horizon, particularly in Germany where intra-day value uplift is strong. Strong policy momentum in support of BESS is being implemented in Southern Europe to enable solar balancing, most prominently in Italy but with ...
