

# Best solar panels price in Belgium

Are solar panels a good investment in Belgium?

Installing solar panels in Belgium offers an attractive return on investment in terms of energy and cost savings. Even without green certificates, owners of photovoltaic systems can recoup their investment in just a few years. To further optimize their financial savings, here are three key ways:

Where can I install solar panels in Belgium?

For the installation of solar panels on the ground, on a protected building or in other regulated cases, you will have to contact your municipality. There are several companies active in Belgium that install solar panels.

How much do solar panels cost?

The price of solar panels has dropped significantly in recent years. In addition, you can receive a subsidy from the government for photovoltaic panels. The average solar panel price is around EUR1.26 per watt peak (Wp), although the exact price depends on a number of criteria:

How many solar panels are there in Brussels?

This represents around 75 solar panels of 430 Watts-peak (Wp: power under standard conditions) 32,250 Wp of installed power. 1. Income from Green Certificates : In Brussels, owners of solar panels can benefit from the green certificate system. Green certificates are granted for 10 years.

How much does a 75 430 watt solar panel cost?

In short, the more you use your own energy, the more you save and the more you earn. Given that an installation of 75 430-Watt peak (Wp) panels costs around EUR35,000 (indicative price, to be refined according to the project!), it will pay for itself in between 3 and 6 years, depending on the region and self-consumption.

How much subsidy can I get for solar panels in Flanders?

Currently the maximum amount of subsidies you can receive for the instalment of solar panels in Flanders is EUR750. In 2024 the maximum subsidy will decrease to EUR375. The subsidy amount is always limited to 40% of the total investment costs including VAT, as stated on the invoices. What Is The Yield Of Solar Panels In Belgium?

There are several photovoltaic panel technologies, each having an impact on the price. Here is a brief overview of the price differences between the technologies: - Monocrystalline panels These panels generally offer the best efficiency and durability. However, their price is often higher than other types of panels.

The return calculation is a trap. They compare solar panels to solar panels + battery. The solar panels are subsidizing the batteries. The real calculation should be the return of only the battery itself. With 4000kWh it is usually earned back after at least 10 years, and the warranty of most batteries are only 10 years.

Social justice : An argument that is often overlooked, non-owners of solar panels have to contribute more to improving the Walloon electricity grid than owners of solar panels if there is no dual-flow meter. If we don't take into account the actual ...
