Deep in the South Atlantic Ocean, thousands of kilometers away from any settlement, lies the most remote island in the world: Bouvet Island. This small and icy uninhabited island is a nature reserve and a dependency of Norway, despite being located 12,500 km away from the Norwegian mainland. Few people have set foot on this...

No wonder sailors call Bouvet the world's most remote island; no wonder writers and science fiction movie-makers keep using it in their storylines. Other stories from the AGU meeting you might like:

Bouvet Island (called Bouvetøya in norwegian) is 49 square kilometer in area. About a quarter of this is taken up by a caldera, called Wilhelmsplateau. The highest point of the island is on the caldera rim, Olavtoppen, at 780 meter; it was climbed for the first time only in 2012. The ice-filled caldera itself is 250 meter below the rim.

Energy Citizenship is an exciting book that offers an innovative look at the study of energy and politics. Kahle convincingly demonstrates that coal workers not only provided the fuel that enabled America to become a superpower but also made vital democratic contributions that reshaped the nation's political landscape. ... Three Mile Island ...

If you want to get away to get away from it all, forget the Caribbean, the South Pacific, or even the South Pole. We've got a place that beats them all: Bouvet Island, a small outcropping of rock and ice in the Southern Ocean. The nearest land is more than a thousand miles away, making Bouvet the most remote island on the planet. A French sailor named ...

The closest lands to Bouvet are more than 1000 miles away. Queen Maud Land of Antarctica is just over 1,000 miles and Cape Town is about 1600 miles away. Therefore living off of this island and depending on shipments could be quite the challenge. Bouvet Island is a frozen inactive volcano. The majority of the island is covered by a glacier!
