

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [bʊˈvæ̂ːøɐ]) is an uninhabited island and dependency of Norway. It is a protected nature reserve. It is a subantarctic volcanic island, situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, and is the world's most remote island.

To understand how remote this island is, let's take a look at what's around it. The closest land to Bouvet Island is Queen Maud Land, in Antarctica, located 1,700 km to the south.

For a place known as "the loneliest place on earth," a surprising number of people have tried to claim it. An uninhabited frozen isle halfway between South Africa and Antarctica,Bouvet Island is the most remote island in the world,and as such,perhaps the most remote landmass in the world.

The expedition carried out aerial photography of the island and was the first Antarctic expedition to use aircraft. : 64 The Dependency Act, passed by the Parliament of Norway on 27 February 1930, established Bouvet Island as a Norwegian dependency, along with Peter I Island and Queen Maud Land.

In 1971, Norway declared the island a protected nature reserve. Today, there is virtually no sign of human activity at Bouvet, with the exception of a single weather station located at Nyrsøya. This is the most common landing point on the island created by a rockslide in the 1950s. Penguins are the most apparent life on the island.

Located 1,404 miles away from the nearest humans--the 271 people who live on the island of Tristan da Cunha, which is incidentally, the most remote inhabited island in the world--Bouvet is not without life, though its vegetation is limited to lichens and mosses, and its only fauna are seals, seabirds, and penguins.
