

Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [bʊˈvæʊə]) is an uninhabited island and dependency of Norway. It is a protected nature reserve. It is a subantarctic volcanic island, situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, and is the world's most remote island.

Why is Bouvet Island a remote island?

This uninhabited volcanic island in Antarctica is almost entirely covered by glaciers, making it difficult to approach. Bouvet Island is recognized as the most remote island on Earth because it is furthest from any other point of land (1,639 km from Antarctica).

Does Bouvet Island have ice?

Ice covers about 94 percent of Bouvet Island year-round. Bouvet Island has little to offer. The most remote island in the world is fewer than 20 square miles in size, and it's almost entirely covered by a glacier. Long ago, it was an active volcano, but those fiery days have long since passed.

Does Bouvet Island have a top-level domain?

But here's the weird thing about Bouvet Island having its own top-level domain: It's uninhabited. It's always been uninhabited. Located in the southern Atlantic, the closest land to Bouvet Island is the coast of Antarctica, 1,100 miles to the south.

When was Bouvet Island occupied?

A few expeditions visited the island in the late 19th century. In 1929, the UK waived its claim in favor of Norway, which had occupied the island two years previously. In 1971, Norway designated Bouvet Island and the adjacent territorial waters as a nature reserve.

When is a DX-pedition coming to Bouvet Island?

Updated news coming soon. We are negotiating the vessel contract for a DX-pedition to Bouvet Island in the period November 2025 to February 2026. Exact dates TBD. The DX-pedition team will consist of up to 20+ operators with extensive experience in DX-pedition and contesting.
