

What are the main sources of energy in Cameroon?

Cameroon's energy consumption shows that biomass, electricity and petroleum are three main sources of energy. Biomass consumption accounts for 74.22%, followed by petroleum (18.48%) and electricity (7.30%), as illustrated by Figure 2.

Can renewables solve energy problems in Cameroon?

Electricity needs are expected to continue rising over the next decade to reach 5000 MW by 2020 and 6000 MW by 2030. This paper seeks to address energy issues (reliability, accessibility and security) in Cameroon and brings to light the potential and meaningful contributions of renewables in solving energy concern.

Does Cameroon have energy potentials?

From this paper, it is obvious that Cameroon has huge energy potentials. There are proven deposits of crude oil, large rivers, biomass and solar energy that have not been fully utilized. Energy production from hydropower has been the main focus of the governments for many years.

Where is biomass used in Cameroon?

Presently, biomass is used virtually in all sectors of the economy in Cameroon i.e. industrial and residential. Biomass provides around 75% and up to 90% of the energy requirement in residential and in the industry sectors respectively.

Is energy a growing industry in Cameroon?

Energy in Cameroon is a growing industry with tremendous potential, especially with the hydroelectric industry.

How much electricity is produced in Cameroon?

Furthermore, 6977 GWh of electricity was produced, 78.29% of which from the major electricity operator (ENEO S.A. Cameroon) and 21.71% from independent producers (GLOBELEQ, ALTAQA Sinohydro China and AGGREKO). More than three quarters of electricity produced were consumed by industry (57.04%) and residential (20.74%) sectors.
