What are micro-cracks & how do they affect solar power?

Micro-cracks represent a form of solar cell degradation and can affect both energy output and the system lifetime of a solar photovoltaic (PV) system.

Why are solar PV cells prone to micro-cracks?

The silicon used in solar PV cells is very thin (in the range of 180 +/- 20 microns) and hence is susceptible to damage easily if the PV module's production and handling are not up to the required standards. Even slight imperfections in the PV cell can lead to large micro-cracks once it is incorporated into the PV module.

What causes micro cracks in solar panels?

Even slight imperfections in the PV cell can lead to large micro-cracks once it is incorporated into the PV module. The length of micro-cracks can vary; some span the whole cell, whereas others appear in only small sections of a cell. Micro Cracks in Solar Panel How do micro-cracks occur?

Are solar module microcracks a recurring issue?

Solar module microcracks are emerging as an increasing, recurring issue detected by visual inspections combined with electroluminescence (EL), a new report from Clean Energy Associates (CEA) shows. The Denver-based clean energy advisory company came to this conclusion by testing samples from 16 countries over eight years.

What are micro-cracks & how do they affect a PV module?

Cracks potentially grow over a longer operational time and thus extend their malicious impact on the functionality and performance of a PV module, potentially triggering hot spots as well. Undetected, micro-cracks can result in a less than expected field lifespan. They differ in size, location on the cell and impact quality.

Do PV modules resist microcrack formation & propagation?

From pv magazine 04/2021 Procuring PV modules that are designed to resist microcrack formation and propagation can help solar asset owners and investors reduce the risk of their projects underperforming in the field. There are merits and drawbacks to different module designs and technologies in terms of microcrack resistance.
