

Philippine off-grid islands are mostly electrified by diesel generators, resulting in costly electricity that is interrupted by fuel supply disruptions. The archipelagic nature of the country also impedes off-grid electrification due to the high capital cost of grid extension. Transitioning from diesel-only systems to hybrid renewable energy systems and ...

The UK's energy mix, long dominated by fossil fuels, is undergoing a rapid transition 1991, just 2 per cent of its electricity was generated using renewables. Today, the proportion stands at nearly half, with a record 47.8 per cent of the energy mix derived from low-carbon sources in the first quarter of 2023. It's an encouraging trajectory, though we're still a ...

A Fluence MABR plant serving a small community on St. Thomas in the United States Virgin Islands weathered a Category 5 hurricane that devastated the island. The low energy requirements of MABR wastewater treatment allowed the community to quickly reestablish treatment on a generator while much of the island's water infrastructure remained ...
