Portable power stations store energy in a battery, while generators use mechanical energy to create electricity. Generators can supply power to devices and larger appliances. They have an average output of 4,000 to 12,000 watts per hour. A portable power station works with devices like laptops, phones, and smaller appliances.

However, it needs continual fuel, which can add up. Portable power stations may cost more initially but have minimal ongoing costs, especially if recharged via solar panels. Factors to Consider When Selecting a Portable Power Station. When selecting a portable power station, various factors can influence your decision.
