What are the benchmarks for PV & energy storage systems?

The benchmarks in this report are bottom-up cost estimates of all major inputs to PV and energy storage system installations. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

Are solar photovoltaic system and energy storage cost benchmarks a unique fingerprint?

Dive into the research topics of 'U.S. Solar Photovoltaic System and Energy Storage Cost Benchmarks: Q1 2021'. Together they form a unique fingerprint. Ramasamy, V., Feldman, D., Desai, J., & Margolis, R. (2021).

How does colocating a PV & storage system save money?

Colocating the PV and storage subsystems produces cost savings by reducing costs related to site preparation, permitting, interconnection, installation labor, hardware (via sharing of hardware such as switchgears, transformers, and controls), overhead, and profit.

What is the difference between a utility-scale and a large PV system?

Larger systems spread these fixed costs across more energy delivered. Utility-scale PV systems are the largest, typically between 5 and 500 MW, with some exceeding 1000 MW.

How has BOS cost impacted modeled PV installation costs?

The increase in BOS cost has been offset by a 17% reduction in module cost. Overall, modeled PV installed costs across the three sectors have declined compared to our Q1 2020 system costs.

Who are the authors of photovoltaic system pricing trends?

Feldman, David, Galen Barbose, Robert Margolis, Mark Bolinger, Donald Chung, Ran Fu, Joachim Seel, Carolyn Davidson, Na&#239;m Darghouth, and Ryan Wiser. 2015. Photovoltaic System Pricing Trends, Historical, Recent, and Near-Term Projections. Golden, CO: National Renewable Energy Laboratory.
