Is Cuba's largest power plant causing a 72 Hour Blackout?

(AP Photo/Ramon Espinosa, File) By Morelys Urbano with SGJC Student News Network Cuba's largest power plant has been identified to be the cause of an energy collapse on Sunday October 20th, causing a more than 72 hour blackout in the entire nation.

What happened to Cuba's power plant?

The situation came to a head on Friday, when Cuba's largest power plant malfunctioned, joining several smaller plants already offline. Foul weather had also stalled the arrival of fuel from tanker ships offshore, starving the island's power plants. The combination prompted the entire grid to collapse.

Why are Cuban thermoelectric plants failing?

"The eight Cuban thermoelectric plants have been in operation for almost 40 years, and these plants require a high level of operational and capital maintenance, which UNE has not provided. This is what has caused all the problems we have seen in the last five years," says Piñón.

Why did Venezuela cut fuel shipments to Cuba?

Long-time ally Venezuela slashed fuel shipments to Cuba by half this year as it struggles to assure supply at home. Allies Russia and Mexico have also cut exports to Cuba, forcing the cash-strapped government to seek far pricer fuel on the spot market.
