In the Czech Republic, the availability of photovoltaic power plants for households has never been better. According to pwXchange, the wholesale price of solar panels has halved since December 2022. Those who install a typical rooftop power plant can now save up to a hundred thousand crowns compared to the previous year. The prices of [...]

Solar power for a larger house would cost around CZK 500,000. For solar systems, the number of panels depends on the size of the house, the roof, and also the accessibility of the sun. Experts from energy companies or companies specializing in solar panel installations can calculate this relatively quickly in advance, even with aerial maps.

By understanding the factors influencing costs and exploring financial incentives, you can make an informed decision about installing a solar system in your Czech home. Embrace the sunshine and embark on a journey towards energy independence!

# Czechia cost of a solar system for a house

The Repair Grandma's House sub-programme offers an advance subsidy for all those who decide to have their homes comprehensively insulated. This initiative is aimed at renovating older homes and families with children will be awarded a bonus of CZK 50,000 per dependent child, helping them on their way to eco-friendly and energy-efficient living.

Households can receive subsidies for installing domestic photovoltaic power plants connected to the distribution system, with the generated energy primarily used within the house. The support for this project ranges from 40,000 to 200,000 crowns, depending on the system's power output.

Regular Savings: Generally, the subsidy will cover up to 50% of the total eligible costs of your rooftop PV system. For example, if your solar PV system costs CZK 100,000 (approx. EUR 4200), the program could potentially provide you with a subsidy of CZK 50,000 (approx. EUR 2100).
