

Is the Czech Republic ready for a phase-out of coal?

A key challenge of the Czech Republic's energy sector over the next decade is to prepare for the phase-out of coal from the energy mix. As the country's only domestic fossil fuel, coal has been and still is a key energy source in the Czech Republic.

What is energy in the Czech Republic?

Energy in the Czech Republic describes energy and electricity production, consumption and import in the Czech Republic. OKD is a major mining company in the Czech Republic. Coal usage: 2019 40.9 Mt, 2020 31.5 Mt, 2021 31.4 Mt, 2022 35.1 Mt The country aims to phase out coal power by 2038 or earlier.

Does the Czech Republic have a new energy policy?

The Czech Republic approved a new National Energy Policy (SEP) aiming to reduce energy consumption and improve the economy's energy intensity. However, reaching the targets of the SEP will require greater effort if the country is to play its part in the g

Is coal still a key energy source in the Czech Republic?

As the country's only domestic fossil fuel, coal has been and still is a key energy source in the Czech Republic. In 2019, it accounted for one-third of total energy supply, 46% of electricity generation and over 25% of residential heating.

Why is natural gas important in the Czech Republic?

This reduction in gas consumption has significantly contributed to the Czech Republic being able to do without gas imports from Russia. However, natural gas will continue to play an important role in the Czech energy sector in the years to come. It will help replace coal in heating and help maintain grid stability in electricity production.

Can the Czech Republic retrain coal miners and power plant workers?

The Czech Republic is hence well placed to leverage the funding to be provided under the European Just Transition Fund, which can be used, among others, to retrain coal miners and power plant workers. The Czech Republic has progressed notably in terms of energy efficiency measures since the IEA's last in-depth review in 2016.

The Chairman of the Czech Energy Regulatory Authority (ERÚ) recently estimated the investment needed into the transmission and distribution system at 271 billion crowns (EUR10.7 billion) by 2030. Not all of that is directly related to the development of green energy, but it is an indication of the kind of money that will need to be found.

Thanks to the unique advantages such as long life cycles, high power density and quality, and minimal

environmental impact, the flywheel/kinetic energy storage system (FESS) is gaining steam recently.

Czechia is in the midst of an energy crisis. Like most of the EU, the country is suffering from a dependency on Russian energy sources; sanctions on Russia aimed at cutting this dependency following the invasion of Ukraine have turned the European energy market upside-down and Russian President Vladimir Putin is turning the screw by strangling gas ...
