

Can Denmark achieve a fully decarbonized energy system in 2045?

A Smart Energy Systems approach modelled by EnergyPLAN. Detailed calculations of different elements of the strategy in 2030 and 2045. This paper presents a strategy for achieving a fully decarbonized Danish energy system (including transport and industry) in 2045. The strategy could also be relevant for most countries at a global level.

What is Denmark's energy plan?

In 2012, the government of Denmark announced an Energy Agreement to eliminate the production of power from coal by 2030, going fossil-fuel-free electricity and heating system by 2035. It also aimed to provide 100% of Denmark's energy to come from renewable sources by 2050.

What energy sources does Denmark use?

Currently, the country produces renewable energy from all sources possible, such as Wind, Geothermal, Solar, and Biomass. In 2012, the government of Denmark announced an Energy Agreement to eliminate the production of power from coal by 2030, going fossil-fuel-free electricity and heating system by 2035.

What is smart energy Denmark 2045?

The making of Smart Energy Denmark 2045 was based on a similar but more limited working process involving experts in different technical areas in a back-and-forth dialogue with energy systems modelling of the role of individual technologies into an overall solution.

Should biomass emissions be included in Smart Energy Denmark 2045?

Biomass emissions are part of the LULUCF sector, i.e., Land Use, Land Use Change and Forestry. In the Smart Energy Denmark 2045 scenario, not only domestic transport should be included. To achieve a fully decarbonized society, Denmark would have to include the Danish share of international shipping and aviation.

Does Denmark have a strong focus on securing sustainable biomass?

There is a strong focus on securing sustainable biomass in Denmark. The world's top innovators in wind energy include the Danish company Vestas and Siemens Gamesa, which has Danish roots. Together these two companies had a share of almost a third of global wind turbine installations in 2018, according to GlobalData (preliminary results).

Novus Green Energy Systems, in a press release said that the initiative was country's largest floating solar plant with a total capacity of 15 MW (AC) / 19.5 MW (DC) and the phase I, which has been commissioned, has a capacity of 5 MW(AC)/6.5MW(DC). The plant uses transparent glass-to-glass solar modules, which are more efficient than ...
