

# Design method for generating electricity using solar energy

How is solar energy used to generate electricity?

Using solar energy to generate electricity can be done either directly and indirectly. In the direct method, PV modules are utilized to convert solar irradiation into electricity. In the indirect method, thermal energy is harnessed employing concentrated solar power (CSP) plants such as Linear Fresnel collectors and parabolic trough collectors.

Which solar power technologies can be used for sustainable electric power generation?

In this article, different solar power technologies have been reviewed which can be utilized for the global sustainable electric power generation. Major emphasis has been on solar photovoltaic (PV) and concentrated solar power (CSP) technologies. Their types, mechanism, efficiency and cost factors have been discussed.

How to produce electricity using concentrated solar power?

Electricity production using concentrated solar power is based on the heat-mechanic-electric energy conversion process. Parabolic trough, the dish/engine, the chimney, and the power tower can be listed as thermal power technologies [2]. The parabolic collector and Stirling engine and generator is a good candidate for investigation.

What has been done in solar power generation & application?

Substantial progress has been made in the area of solar power generation and application covering analysis, simulation, and hardware development and testing for efficiency maximization and cost minimization.

Can solar power be used for sustainable electricity generation?

Solar power systems are relatively affordable and they are suitable for both urban and rural areas. With this background, solar power technologies which can be utilized for the development of a sustainable electricity generation have been thoroughly reviewed in this research work.

How can a model be used to simulate a solar PV system?

They have also demonstrated the capability of the model in accurately simulating the I-V and P-V characteristics of the real PV module. The proposed model can also be used to design and simulate solar PV system with different power converter topologies and controllers including different MPPT control methods.
