

Design principles for wind solar and energy storage microgrids

What are the main objectives of a microgrid?

One of the main objectives of the microgrid concept is to facilitate adaptation of clean and environment friendly energy sources. Therefore, the commonly featuring energy sources in a microgrid are renewable energy sources such as wind, solar, biomass, etc.

What drives microgrid development?

Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity.

How the storage system of a microgrid works?

How the storage system of the microgrid works. It contains two main components: the battery and the bidirectional DC/DC converter which charge and discharge the battery at the required voltages. Battery The battery is an essential part of the microgrid because it is used to store the energy which is not used in certain moments of operation (When the

What is a microgrid system?

A microgrid system is a low/medium voltage power network that hosts distributed and renewable energy sources, storage devices, and loads, with a view to best utilise renewable energy resources and reduce dependency on fossil fuel-based energy sources to ensure reduction in greenhouse gas (GHG) emission.

Which technologies are considered for optimal sizing microgrid configuration?

Diverse RE technologies such as photovoltaic (PV) systems, biomass, batteries, wind turbines, and converters are considered for system configuration to obtain this goal. Net present cost (NPC) is this study's objective function for optimal sizing microgrid configuration.

How can a microgrid improve the reliability of solar PV?

In order to overcome the problems associated with the intermittency of solar PV and enhance the reliability, energy storage systems like batteries and/or backup systems like diesel generators are commonly included in the microgrids [11,12].
