Confusingly, I believe it's the reciprocal  $1/C$  that corresponds to the spring constant so a stiff spring is like a weak capacitor. For a given applied force (voltage), a stiff, high- $k$  spring will displace very little (weak, low- $C$  capacitor will store very little charge) and store  $\frac{1}{2}kx^2$  energy in the spring ( $\frac{Q^2}{2C}$  in the cap) . I also think of the resonant frequency as a mnemonic; spring ...
