

Photovoltaic (PV) technology is rapidly developing for grid-tied applications around the globe. However, the high level PV integration in the distribution networks is tailed ...

Globally, distributed solar PV capacity is forecast to increase by over 250% during the forecast period, reaching 530 GW by 2024 in the main case. Compared with the previous six-year period, expansion more than doubles, with the share of ...

support functions (GSFs) on photovoltaic (PV) customer energy production on a real distribution feeder in Oahu, HI. These autonomous GSFs based on local voltage measurements are good ...

The distributed photovoltaic power generation is an important way to make use of solar energy in cities. China issues a series of policies to support the development of distributed photovoltaics ...

According to the above analysis, in the operation mode of DC hybrid distribution network, the characteristic parameters of source-load uncertainty in the process of distributed photovoltaic consumption are ...

With the expansion of the power system and the growth in renewable energy penetration, the installed capacity of distributed photovoltaics in the power system will increase significantly in ...

The development of distributed PV industry also faces the bottleneck because of the investment and financing issues. Since there is no debt financing channel, the yield rate of ...
