

Do we need to move the solar panels

Can I move solar PV panels?

Yes, it is possible to move solar PV panels; however, the costs will likely outweigh the benefits. Unless you have a very large system, you will no longer be eligible for Feed-in Tariff payments. Additionally, the solar PV system's efficiency may be compromised when moved.

Will my solar PV system work if I move house?

You'll no longer be eligible for Feed in Tariff payments, and your solar PV system probably won't work as efficiently. Solar panels are normally considered a 'fixture' of the house. Just as you (probably!) wouldn't take your boiler with you when moving house, most people wouldn't take solar panels with them either.

How much does it cost to move solar panels?

Read here Moving solar panels is technically possible but not financially advisable. Relocation costs include labour, scaffolding, MCS re-registration, and storage, totalling approximately £5,280. These costs can amount to a huge chunk of the initial installation cost of the solar system.

Should building-mounted solar panels be allowed to move?

Allowing the panels and the tariff to move with their owner will increase flexibility and make solar PV a much more attractive investment. The definition of building-mounted solar under the Feed-in Tariff will be amended to require the building to use at least 10 per cent of the electricity generated.

Can a solar company move my solar system?

If you're moving within the service area covered by your solar company, you should be able to have them move the solar system for you. Of course, this won't be free. But you'll have the peace of mind of knowing that the process is being handled by qualified professionals.

Can a solar system be moved between buildings?

From summer 2019, medium and large building-mounted solar PV systems that exceed 50 kW are allowed to be moved between buildings without the loss of Feed-in Tariff (FIT) payments. This exception applies only to these larger systems.

If you have leased solar panels, the situation differs because you do not own the panels outright. In this case, you need to contact your solar provider to discuss if it's possible to move the panels to your new location. If ...

The current commercially operated solar panels that we use have only around 20 to 35% efficiency. Hence, to power a solar car, we would need a lot of extra space for solar cells. But doing so ...
