

Ecozen solutions Pitcairn Islands

Who is ecozen solutions?

Ecozen Solutions is an Indian company specialising in portable solar cold rooms which have thermal energy storage and are designed to work even in low sunlight. The farmers using the cold rooms have seen significant increases in their profits. "Ecozen received my vote due to the strength of linkage between energy and agriculture/food preservation.

Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

What is ecozen doing in Pune?

Ecozen are also developing a new agriculture lab for research and crop testing at their facility in Pune to provide open source data for farmers and retailers. Ecozen's long-term vision is to become the gold standard for cold storage and provide end-to-end solutions which integrate the whole supply chain.

What is ecozen & how does it work?

Ecozen operates a toll-free call centre and aims to educate their customers and help them get the most out of their systems. Farmer and his father with their Ecofrost in Sakoni village Ecofrost allows farmers to reduce wastage and sell their good quality produce for better prices.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km² and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

Why are the Pitcairn Islands isolated?

Isolation: the geographic isolation of the Pitcairn Islands, which are located more than 100 km away from each other and more than 4,000 km from any continent, limits the chances of healthy coral larvae reaching the islands from elsewhere.
