

Electrical wind power generation ranking

Which countries produce the most wind power in 2022?

Denmark produced 55% of its electricity from wind in 2022, a larger share than any other country. Latvia's wind capacity grew by 75%, the largest percent increase in 2022. In November 2018, wind power generation in Scotland was higher than the country's electricity consumption during the month.

Which country produces the most wind power?

Key findings from the data include: China continues to dominate wind power generation with 466.5 MWh, followed by the United States at 341.4 MWh, and Germany at 132.1 MWh.

How much wind power does the world need?

The world's installed wind power capacity now meets around 10% of global electricity demand - another important milestone. More than ten countries now have a wind power share of more than 20%, led by Denmark, which generates an astonishing 56% of its electricity from wind.

How many GW of wind power are there in 2022?

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2022, it amounts to almost 900 GW.

Which countries have the best wind power markets?

Emerging wind power markets, such as Brazil, India, and Mexico, hold their own against traditional markets, ranking in the top 13 globally. This signifies a positive shift towards renewable energy in these rapidly developing economies.

How much wind power does the United States have?

In another major milestone, the United States passed 150 Gigawatts of total wind capacity, but the market was much weaker than in the previous year, adding only 6.4 Gigawatts - much less than in 2022 and in 2021, when 13.7 GW were added, more than double the capacity of 2023.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this document. ... Share of electricity generated ...

Wind power accounts for about 8% of global electricity generation, and countries around the globe continue to develop and scale up their wind power generation capacity. You might be curious, ...

Utility scale includes electricity generation and capacity of electric power plants with at least 1,000 kilowatts, or 1 megawatt (MW), ... In 2010, wind and solar generators were ...

Electrical wind power generation ranking

Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources. Our World in Data. Browse by topic. ... "Data Page: Electricity generation from ...

In 2028, solar PV surpasses wind electricity generation. Share of renewable electricity generation by technology, 2000-2028 ... By 2028, 68 countries will have renewables as their main power generation source but still only account for ...

Share of electricity production from wind, 2023 [1] Global map of wind speed at 100 m above surface level [2]. The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of ...

Germany and Brazil were third and fourth in the ranking, respectively. ... Wind electricity production per capita worldwide 2023, by country ... Leading countries in wind power generation ...
