

What is the energy transition in Poland?

Wholesale energy prices in Poland compared to other EU countries remain very high, and the economy's dependence on imported fossil fuels is growing rapidly. In the latest, seventh edition of the "Energy Transition in Poland" report, Forum Energii presents the state of transition play and a broader look at the overall process.

What is the energy policy of Poland until 2040?

In 2021, Poland adopted the Energy policy of Poland until 2040 (PEP2040) programme with the following main targets: 32 percent of renewables in electricity generation and no more than 56 percent of power from coal by 2030, and the first nuclear power plant starting operation in 2033.

Could PGE Group be a 'Energy Transition Champion' in Poland?

If the European Commission does not lose sight of the common climate target shared by all Member States, PGE Group has a real chance of becoming an energy transition champion in Poland and contributing significantly to the target emission reduction across the European Union. EURACTIV Special Reports...

What is the burden on Poland's energy transition?

The burden of coal- Coal power is the heaviest burden on Poland's energy transition. The previous government said that Poland would be the last EU country to use coal for power generation well into the 2040s.

Does Poland have a helmsman for the energy transition?

The energy transition in Poland has no helmsman. There is no single centre to manage the process, so the changes taking place are chaotic. Poland has never offered a comprehensive vision for the decarbonisation of the economy or a plan to reduce dependence on energy resources imported from abroad.

Who owns the energy sector in Poland?

The country's energy sector is dominated by big, state-owned or partially state-owned companies, like the oil corporation Orlen or Polska Grupa Energetyczna (PGE), an energy company that owns coal plants and mines. Poland has managed to diversify its gas, oil and coal supplies, after being heavily reliant on imports from Russia.

The Center for Emerging Energies seeks to enhance public understanding of the emerging energy technologies that will power our future by providing information backed by expert resources. With factual information, everyone can be empowered to join the conversation.

Poland has the ambition to develop 5.9 GW of offshore wind by 2030 and up to 11 GW by 2040. With a combined capacity of 1440 MW, Bałtyk II and Bałtyk III could generate enough renewable offshore wind energy to ...
