

Is there an alternative to solar energy in Chile?

Chile has begun to explore an alternative. Both Cerro Dominador and the Alba Project are powered by so-called solar salts, extracted from the Atacama Desert, composed of potassium nitrate and sodium nitrate. When melted and kept in a liquid state, they allow energy to be stored.

How much energy does Chile produce?

"It was seen as something ambitious and it has already been surpassed." Today 35.4 per cent of the energy generated in Chile is wind and solar, and 37.2 per cent comes from water sources in the National Electric System (SEN), which covers the vast majority of demand. Oil, coal and gas represent 26.9 per cent.

How much of Chile's energy will come from Sun and wind?

"A decade ago, no one would have imagined that more than a third of Chile's energy would come from the sun and wind before 2030," the former Environment Minister of Chile Marcelo Mena says. "It was seen as something ambitious and it has already been surpassed."

Somos una comercializadora y productora independiente de energí;a a partir de fuentes renovables, limpias e ilimitadas. Toda nuestra energí;a es producida en plantas eólicas y solares que desarrollamos y operamos nosotros mismos.
