

AES is the world leader in lithium-ion-based energy storage, both through our business project and joint venture, Fluence. We pioneered the technology over one decade ago, and today almost half our new projects include a storage component. Energy storage is a "force multiplier" for carbon-free energy.

Three utility scale battery energy storage projects collocated with solar plants were announced last week in Chile. Enel is building a 67 MW/134 MWh battery, while CJR Renewable and Uriel Renovables are planning 200 ...

Chile will add a further 1 GW of capacity by 2026, with public land set aside by the government for energy storage projects in a reportedly imminent tender. The energy ministry spokesperson told Dialogue Earth that the country's environmental assessment body is currently assessing the viability of 300 more storage projects, with a total ...

With 23 energy storage projects already approved, totaling an impressive 3,000 MW of capacity, Chile is at the forefront of innovation and efficiency in Latin America. During its recent ...

Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation.

In an effort to meet this demand, the Chilean government confirmed earlier this year that it would allocate \$2 billion for large-scale storage auctions. Chile's highly ambitious energy storage strategy, coupled with its significant supplies of lithium - an important component of batteries used in energy storage systems - means that the ...

Most of the announced energy storage projects will help Chile balance its electricity supply in a system where more than half of the electricity generated comes from renewable energy sources (RES). According to think tank Ember, 24.4% of the country's power generation in 2022 came from hydropower plants, while solar, wind and all other ...

In an effort to meet this demand, the Chilean government confirmed earlier this year that it would allocate \$2 billion for large-scale storage auctions. Chile's highly ambitious energy storage strategy, coupled with its ...

In 2022, Chile passed an energy storage and electromobility bill, which made stand-alone storage projects profitable, but the market is still expecting new rules on capacity payment for storage projects, which are to be approved in 2024. Chile has also put in place an auction procedure to award public land for the development of BESS projects.

With 23 energy storage projects already approved, totaling an impressive 3,000 MW of capacity, Chile is at the forefront of innovation and efficiency in Latin America. During its recent participation in COP28 in Dubai, Chile not only reaffirmed its commitment to renewable energy, but also highlighted its focus on energy storage as a fundamental ...

Three utility scale battery energy storage projects collocated with solar plants were announced last week in Chile. Enel is building a 67 MW/134 MWh battery, while CJR Renewable and Uriel Renovables are planning 200 MW/800 MWh ...
