

Which EnergSys® Cyclon battery is best?

At high-rate and pulse discharges, EnergSys® CYCLON batteries offer the best performance value when compared with competitive product in applications at less than 100 minutes of discharge. Cycle life - Compared to competitive lead products (offering up to 200 full cycles), pure lead batteries provide 50% to 200% greater full cycle capability.

Are Cyclon batteries safe?

Constructed of high-purity materials, CYCLON® batteries are engineered to provide longer service life, high reliability and with fewer replacements. Safe enough for installations in offices or hospitals. From general purpose to extremely demanding applications, CYCLON batteries offer better performance and lower long-term cost of ownership.

Why should you choose Cyclon batteries?

From general purpose to extremely demanding applications, CYCLON batteries offer better performance and lower long-term cost of ownership. A rugged metal outer jacket offers strong protection from shock, vibration and extreme temperature.

Are Cyclon batteries nonspillable?

The Department of Transportation (DOT) has classified all CYCLON batteries as "nonspillable wet electric storage batteries." Having been tested and found in compliance with section 173.159 (d) of the 49 CFR, subchapter 173.159, CYCLON batteries are exempt and unregulated regarding shipping requirements of DOT 173.159. As a result,

Are Cyclon batteries UL certified?

All CYCLON batteries are recognized as UL components. Both the positive and negative plates are made of pure lead-tin and are extremely thin. The plates are pasted with lead oxides, separated by an absorbing glass mat separator and spirally wound to form the basic element.

What temperature should a Cyclon battery be used at?

41°F (5°C) to 105.8°F (41°C). There are two main considerations relative to the application of CYCLON cells and batteries that should be recognized to assure that the usage is safe and proper. These are gassing and shorting. Lead-acid batteries produce hydrogen and oxygen gases internally during charging and overcharging.
