

Equatorial Guinea kemet energy

Why is energy in Equatorial Guinea declining?

Energy in Equatorial Guinea is an industry with plenty of potential, especially in the fields of oil and natural gas. However, production has been declining in recent years due to under-investment and lack of new discoveries. In 2022, the country produced less than 100,000 barrels of oil per day (bopd) according to OPEC data.

What is Trident Energy doing in Equatorial Guinea?

Trident Energy's plan in Equatorial Guinea not only delivered initial gains but also outlines years of future cost-effective production increases. Trident Energy has a multi-faceted plan to further develop the Ceiba and Okume assets. Trident Energy explores every avenue in the hunt for production efficiencies and optimisation.

How much energy does Equatorial Guinea use?

Electricity consumption in Equatorial Guinea in 2015 was 36 kilotonnes of oil equivalent (ktoe). The country produces all of the energy it consumes. As of 2012, renewable energy accounted for 29.2% of the final energy mix.

How much oil does Equatorial Guinea produce a day?

In 2022, the country produced less than 100,000 barrels of oil per day (bopd) according to OPEC data. Electricity consumption in Equatorial Guinea in 2015 was 36 kilotonnes of oil equivalent (ktoe). The country produces all of the energy it consumes.

What are the different types of energy transformation in Equatorial Guinea?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Equatorial Guinea for 2022. Another important form of transformation is the generation of electricity.

How have we improved Equatorial Guinea?

We have achieved this through a series of improvements including: Eight workover conversions which saw the first electrical submersible pumps (ESPs) installed in Equatorial Guinea - 1.5 million barrels of oil were gained from this. Three mud acid campaigns where 15 wells have been treated with a total gain of 3,000 barrels of oil per day (bopd).
