

Haiti importance of solar energy

How can Haiti improve energy resilience?

In the face of these obstacles, Haiti is forging a path toward energy resilience with support from USAID and the National Renewable Energy Laboratory (NREL). Central to this effort is the development of energy modeling frameworks and trainings, microgrids, agrivoltaics, and off-grid solar power to enhance energy resilience and security in Haiti.

Is Haiti a good place for solar power?

Haiti enjoys abundant sunlight throughout the year, making it an excellent candidate for solar power systems.

What type of energy is used in Haiti?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Haiti: How much of the country's energy comes from nuclear power?

How can agrivoltaic solutions improve energy production in Haiti?

Through research and stakeholder engagement, USAID and NREL published a framework to adapt agrivoltaic solutions for minigrid contexts in Haiti. These solutions aim to boost energy production, thereby addressing energy poverty, and increase agricultural yields, thereby addressing food insecurity.

Can off-grid solar improve Haiti's energy access?

In parallel with other efforts like minigrid development and national grid planning, off-grid solar also has the potential to play an important role in advancing Haiti's energy access. As the name suggests, off-grid solar systems operate independently from the traditional electricity grid.

Is biomass a source of electricity in Haiti?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Haiti: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Haiti importance of solar energy

Haiti receives very high levels of solar irradiation (GHI) of 5.5 kWh/m²/day and a specific yield 4.7 kWh/kWp/day indicating a very strong technical feasibility for solar in the country.⁷ Haiti's largest solar plant of 12 MW, funded by the IDB and USAID, is planned to be commissioned by 2023.⁸

But the energy mix - the balance of sources of energy in the supply - is becoming increasingly important as countries try to shift away from fossil fuels towards low-carbon sources of energy (nuclear or renewables including hydropower, solar and wind).
