

How can I have a stored value system

What can you do with a stored value card?

Once the value on the card is used up, the card value can be topped up; imagine reloading a fare card for public transport. Otherwise, the card can simply be thrown away. There are numerous applications for organization-specific or industry-specific stored-value cards. Consider department stores that issue their own branded gift cards.

What is a stored value card (SVC)?

Unlike traditional debit cards, SVCs come pre-loaded with a specific dollar value. This innovative payment method is provided by credit card networks, bank card issuers, and retail merchants, offering a non-cash payment alternative for various purposes. Stored Value Cards are categorized into two main types: closed-loop and open-loop cards.

What is a stored-value card?

Another distinguishing feature of stored-value cards is their lifecycle. Once the value on the card is used up, the card value can be topped up; imagine reloading a fare card for public transport. Otherwise, the card can simply be thrown away. There are numerous applications for organization-specific or industry-specific stored-value cards.

What are the different types of stored value cards?

Stored Value Cards are categorized into two main types: closed-loop and open-loop cards. Closed-loop cards, exemplified by Visa, Mastercard, and American Express gift cards, have a one-time limit. In contrast, open-loop cards can be reloaded with funds, allowing users to utilize them continuously.

What is a stored value credit card?

Stored-value cards differ from debit cards, where money is on deposit with the issuer, and credit cards which are subject to credit limits set by the issuer and are connected to accounts at financial institutions.

How to develop a profitable stored value card system structure?

To develop a profitable stored value card system structure, providers should complete a market analysis to determine card volume potential, card load potential, anticipated frequency of use, break-even analysis of frequency of use and potential float volume.

Overview Uses Names Prepaid cards Money laundering See also Sources Stored-value cards are most commonly used for low-value transactions, such as transit system farecards, telephone prepaid calling cards, cafeterias, or for micropayments in shops or vending machines. They also have an advantage over most other payment cards in that when making, say, a purchase, telecommunication facilities are not needed, which may be important in situations...
