What are photovoltaic panels & how do they work?

Photovoltaic panels, or solar panels, are the most crucial component of a solar power system. They are responsible for converting sunlight into direct current (DC) electricity through a process called the photovoltaic effect. Solar panels are made up of many individual solar cells, which are usually made from silicon, a semi-conducting material.

How to install solar panels?

Once racks are in place, installers have to carefully place solar panels on them while utilizing suitable clamps or mountings. The solar system needs to be wired after mounting equipment's. Electrical conduit should run from various parts like inverters, disconnects, electrical panels to the solar panels among others.

How to choose a solar panel installation site?

Prioritize ease of maintenance when selecting your solar panel installation site. The panels should be accessible for regular cleaning, as dust, bird droppings, snow can accumulate and reduce their effectiveness. -- Remi Akinwonmi, solar expert and clean energy advocate, Advisory Board Member Wondering how to install solar panels?

How long does it take to install solar panels?

Once you decide on a solar company and system, the installation process begins. The time it takes to get your solar panels up and running depends on a handful of factors. Generally, you can expect to wait a few months before your solar panels produce energy for your home. In that time, your solar company should follow these five main steps: 1.

How do solar panels connect to a roof?

In short, the solar panels connect to a roof-mounted frame. The solar panels sit on the frame and are clamped with either a bolt, bracket, or other clamping devices. If you are using a kit, the clamps will match the frame making it easy to secure the panels to the roof.

Should you install solar panels on a roof?

A solar installer puts panels on a roof. Going solar to save some money could be a good decision for a lot of people. Installing solar yourself to save a bit more, however, probably isn't a great idea. Solar panels already cost a decent chunk of change, and screwing up an installation will cost you valuable time and money.
