Are microgrids a good investment?

Microgrids that incorporate renewable energy resources can have environmental benefits in terms of reduced greenhouse gas emissions and air pollutants. In some cases, microgrids can sell power back to the grid during normal operations. Depending on the complexity, microgrids can have high upfront capital costs.

How much does a microgrid cost?

Or as S&C Electric's David Chiesa puts it: "If you've seen one microgrid ...you've seen one microgrid." So there is no quick and simple price to give a prospective customer. Sources we've interviewed cite project proposals as low as \$250,000 to as high as \$100 million. Generation typically accounts for most of the cost.

Can microgrids bring electricity to all?

Most generate their own power using renewable energy like wind and solar. In power outages when the main electricity grid fails, microgrids can keep going. They can also be used to provide power in remote areas. A nun in the Democratic Republic of Congo is showing the world how microgrids can bring electricity to all.

What are microgrids & how do they work?

Microgrids are local power grids that can be operated independently of the main - and generally much bigger - electricity grid in an area. Microgrids can be used to power a single building, like a hospital or police station, or a collection of buildings, like an industrial park, university campus, military base or neighbourhood.

Is a microgrid more expensive than a small solar array?

True, larger microgrids will likely be more expensive than smaller microgrids -- but in gross terms, not necessarily on a per kilowatt basis. In fact, generation for a very small microgrid tends to cost more per kilowatt than a comparable larger version. For example, a 50-kW solar array is more expensive per kilowatt than 1-MW solar array.

How many microgrids are there?

In the US, there are 160 microgrids, according to the Center for Climate and Energy Solutions. Alaska, Texas, New York and California are some of the seven states where these are mostly based. India also has 160 microgrid solutions across four states, according to Hive Power, a Swiss smart grid specialist. More than 80% of these are solar powered.
