

# How to add a switch to a solar power lamp

Should a solar light switch be on or off?

If you've got a solar light with an on/off switch, your switch needs to be ON while in use. When storing, not using, or preserving battery life, you can turn your solar light switch to OFF. If you aren't totally sure when your solar light switch should be on or off, or if you want some more specifics on solar lights, you're in the right place.

How does a solar light switch work?

The solar light switch gives users control over the activation and deactivation of the lights, impacting energy efficiency and battery life. By utilizing the switch to turn off the lights when not needed, users can enhance energy efficiency and prolong the battery life of the solar lights.

Do solar lights have a power switch?

Solar lights turn on and off automatically with the help of a light sensor, but you might be in a case where you need to turn it on during the day or turn it off during the night if you are traveling for a long period. However, you should know that not all solar lights include a power switch.

Do solar lights have a manual on/off switch?

Nowadays, most solar lights also have an outer manual on/off switch that allows the light to function at all. It's important to check your solar lights or any solar lights you look into purchasing as some of them may not have that outer manual on/off switch.

Why should you use a solar light switch?

Furthermore, the switch acts as a way to prevent premature activation during daylight hours. By using the switch on your solar lights, you can manage energy consumption effectively and extend the battery life of the light.

How do I reattach a solar lamp?

Remove the top (A) by unscrewing the 2 screw caps. Turn the operation switch to "summer" (for greater brightness) or "winter" (for longer duration) position. The Solar Lamp will automatically operate at dusk. Reattach top (A) and secure with the 2 screw caps. Read carefully the next section.
