

How to bond wires to photovoltaic panels

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

Does a PV system need to be bonded?

There is no requirement that a PV system be bonded at its disconnecting means but, if it is bonded there, the PV system grounded conductor is required to be connected to a grounding electrode system.

Why do solar panels need bonding?

Bonding prevents a host of possible risks and dangers. "Imagine: the insulation on a PV source circuit wire becomes damaged, and the current-carrying part of the conductor makes contact with a frame or rail," said Brian Mehalic, PV Curriculum Developer and Instructor at Solar Energy International.

What are the bonding and grounding requirements for PV systems?

The specific bonding and grounding requirements for PV systems in Article 690 are in Part V. Section 690.41 covers system grounding, allowing both grounded and ungrounded PV array conductors.

How do you wire a solar panel?

Voltage, current, wattage, and power are key electrical terms for solar panel wiring. Series wiring increases voltage, parallel wiring increases current. Bypass diodes prevent power loss in shaded panels. Consider system requirements and electrical characteristics for optimal wiring.

Should PV panels be wired in series?

When wiring panels in series, you're joining the positive terminal of one panel to the negative terminal of another. The benefit to connecting your PV modules in series is that each panel increases the total voltage output of the entire system while the amperage stays the same.

Depending on the wire size, a power drill can sometimes be used to twist wiring. Just secure the ends of the wiring into the drill's chuck and let the drill's action twist the cables together. Make sure to run the drill at the lowest possible ...
